YOUR CONFIGURATION IN PHOTOS:

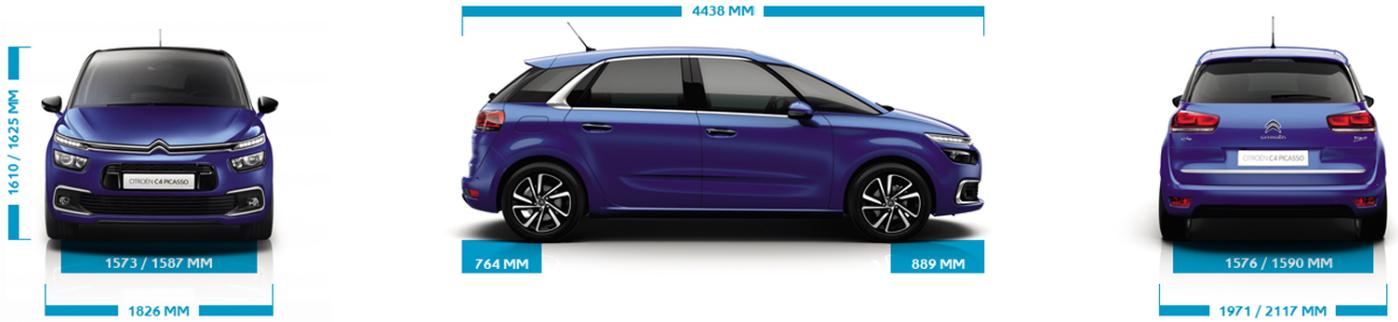

The vehicle presented as an example only and may not match configured version. The fuel consumption you achieve, and CO2 produced, in real world conditions will depend upon a number of factors: including the accessories fitted (post registration), variations in weather, driving styles and vehicle load. There is a new test (WLTP*) used to measure fuel consumption and CO2 figures. The CO2 figures shown are NEDC equivalent, calculated using an EC correlation tool which converts WLTP figures to NEDC figures, however, these NEDCeq figures are based on the outgoing test cycle (NEDC**) and will be used to calculate tax for first registration. Figures shown are for comparison purposes; you should only compare fuel consumption and CO2 figures with other vehicles tested using the same technical standard. Estimated data, provided for information only and subject to approval.*WLTP - Worldwide harmonized Light vehicles Test Procedure. **NEDCeq - NewEuropean Driving Cycle
